

EnerTrac Dashboard

Understanding Your Energy Cost Basis

Energy bills are complicated; most customers receive bills from multiple providers, all of which are organized differently, cover different periods of time, and arrive on different schedules. NuEnergen's energy dashboard, EnerTrac, helps normalize and report on costs in a meaningful manner.

Accessible from any web-enabled computer, users are provided 24/7/365 access to utility data and are able to download a wide variety of reports. In turn, this allows the customer to understand costs and consumption such that you can make informed business decisions.

How It Works

- EnerTrac is built by digitizing and uploading your invoices into our database, something NuEnergen staff does so you don't have to commit time to organize it all.
- NuEnergen in most cases can also collect your invoices on our own; once we set up the proper channels, our data specialists will upload bills independently of you.
- You can access the dashboard at any time, and download reports by location, date and commodity. Failing that, we can also simply send the reports to you.

We Do Budgets Too

With access to your energy billing, NuEnergen is well-placed to help you develop annual energy forecasts. Better still, we can track the performance of the budget that is agreed to against incoming invoices on a monthly basis.

EnerTrac has
records of
tens of
thousands of
customer
bills across
the US
